## RELIABLE SOURCE SCAVENGER HUNT

Just like Agent and Chicken in the video, we need to be smart about where we get our information! We should use **reliable sources** that are trustworthy and accurate. Today, we are going to brainstorm sources as an inspiration for what we should be searching for and then investigate their credibility!

### YOUR MISSION

Choose a topic you'd like to learn about. Then, brainstorm different types of **reliable sources** you could use to find information on that topic. Utilizing safe Internet searches and available educational resources, decide what reliable sources you would utilize and explain why it is a good, trustworthy source.

**MY TOPIC** (Choose one from the examples below or create your own!)

- The best way to grow a sunflower
- How to train a puppy
- What makes a healthy meal
- How rockets work

**MY CHOSEN TOPIC**

---

**TYPE OF SOURCES**

Brainstorm your ideas for reliable sources. Then, in the space provided below, write down some types of reliable sources you think you could use for your research project and then explain why these sources would be considered reliable.

For example, if I wanted to learn the best way to grow a sunflower, I would want to consider a source that is well-established, has longstanding expertise and knowledge about sunflowers, and can provide practical and comprehensive support to me to help me as I attempt to grow a sunflower.

This may be an agricultural organization, a horticultural department in a college or university, or an esteemed gardener.

<b>RELIABLE RESOURCE 1</b>	This resource would be reliable because...
